

Weighing System for Milk Refrigerator Tank

The weighing system for milk refrigerator tanks has been duly projected and made to guarantee the maximum of accuracy and reliability. This system is mainly based on stain-steel load cells which are positioned under the refrigerator tank's feet and that do send the weight to the weighing indicator GL 200, which converts the weight in Kilo into Litres. In such way it is possible to have a right verification of the weight of the milk.

GL 200: Weighing indicator equipped with bright graphic display and big numbers, it allows to visualise the real weight registered by the load cells so that to indicate the total or the partial weight. It registers, in Kilos and/or Litres, the milk effectively produced and, therefore, it is possible to have an unflinching verification of the weight of the milk, with the chance to memorize up to 100 weight values. Possibility to print wished data.

ASSEMBLING KIT FOR STAIN-STEEL LOAD CELLS

Please always connect all yellow load cells' wires with the scales' yellow wire. Repeat said operation for the green, white and red wires.

**INSTEAD OF SCALE GL200 WE PROPOSE IN ALTERNATIVE OUR
WEIGHING INDICATOR HL10.**

Installations of Milk refrigerator tanks are renewed thanks to the new weighing indicator HL10, entirely projected and manufactured by PTM: it disposes of a 6 digits LED and it permits to visualize the partial and the total weight of the product to be loaded or unloaded. Easy to use and to manage, not cumbersome at all and particularly at cheap price, meets the needs of owners of milk refrigerator tanks.

P.O. Homologated weighing system: The indicator P.O. is an homologated version which is legal for the commerce.

From month of May 2006, PTM has become a metric producer, after having overcome the strict metric controls by the Chamber of Commerce.

PTM projects, produces and installs homologated weighing systems for milk refrigerator tank and for other installations.
